ROADMAP	04

Welcome to HACKD!

HACKD is a new ERC20 token, which launched on 11 August 2021, 11pm UTC in a Fair Launch Call (FLC, <https://twitter.com/fairlaunchcalls>) in memory of the #PolyNetwork Hacker, who has partially returned his heisted coins. HACKD is what true decentralization and spontaneous community building look like: no single decision-maker, no dev tokens a Decentralized Autonomous Organization (DAO) with a really cool name and cute emoji police car in its logo. Who sits inside? You can decide!

Background & Early Beginning

Thanks to Fair Launch Calls (FLC), the three top sniper wallets during launch were blocked. Why that? Because it was supposed to be a FAIR launch, but some big bad boys did not listen and have been appropriately sanctioned by FLC. We realized quickly that the even distribution of holders is a unique chance for everybody to get involved early without one single voice dictating the outcome of this journey.

Next Steps (August 2021)

We work progressively and take everybody's voice into account. Our first DAO-style opinion poll has shown a strong adherence to making HACKD an ethics and compliance-oriented governance token. We have hence created a Core Team that everybody is free to join. The HACKD Core Team is diligently crafting a roadmap for the next steps. By investing into HACKD, you will participate in the first DAO based on ethics willing to tackle one of the toughest questions in the crypto sphere: how to be ethical, safe... without government and police intervention? Can a spontaneously built community regulate itself in an ethical manner?

What Is HACKD?

The recent PolyNetwork has shown: crypto is not always a safe place. There is not only plenty of information to absorb, but new investors in particular do not yet have a safe space to interact with each other and get their questions answered.

HACKD Use Case

Human interaction has become increasingly virtual; most people have moved their social and business relationships online. But especially during these new habits, criminal activity persists and is increasingly growing. In this way the ethical and social responsibility that exists to provide tools and resources in the virtual space is essential to create an adaptive environment for new crypto investors to thrive and monetize.

We at HACKD want you to be in a safe space, whether you're a seasoned trader or complete noob. We are here to learn from each other.

HACKD DAO

HACKD tokens will be allocated for voting within a Decentralized Autonomous Organization (DAO), similar to the first decisions taken by the community, thereby ensuring the project is self-sustaining and has no owner at the top. As this was a fair launch without team tokens or allocations, everybody in HACKD is an investor including the team, everyone is on equal footing and shares a vested interest in the success of the project. HACKD holders can create proposals on their own and vote on them to drive the project.

Token Name:	Ticker:	Decimals:
HACKD	HACKD	09
Total Supply:	Circulating Supply:	Chain:
1 QUADRILLION	Deflationary	ERC 20

Contact Address:

TOKEN DISTRIBUTION

- 100% Community Driving
- 3% Reflections To Holder
- 7% to Project Development and to Build the Liquidity
- Liquidity Locked for 100 Years

Local Community Building

A key focus of our community building operations involves the creation of local Community Groups via social media (ie. Telegram). Our strategy is to directly employ experienced group managers in the local Community and to have them organize the creation and translation of content in the native language, tailored to the culture of the community. It is important to grow the community
